

In the Name of Allah

Project Title: Prj 11

Programming Software: Visual Studio Code, Version 1.73.1

Programming language: JavaScript

Project Description :

1. If your country's population is greater than 33 million, use the ternary operator to log a string like this to the console: 'Portugal's population is above average'. Otherwise, simply log 'Portugal's population is below average'. Notice how only one word changes between these two sentences!
2. After checking the result, change the population temporarily to 13 and then to 130. See the different results, and set the population back to original

Project Solution :

```
let population = 85; // for 2021 in million
console.log(
  `Iran's population is ${population > 33 ? 'above' : 'below'} average `
);
population = 13;
console.log(
  `Iran's population is ${population > 33 ? 'above' : 'below'} average `
);
population = 130;
console.log(
  `Iran's population is ${population > 33 ? 'above' : 'below'} average `
);
population = 85;
```
