

## In the Name of Allah

**Project Title:** Prj 12

**Programming Software:** Visual Studio Code, Version 1.73.1

**Programming language:** JavaScript

### Project Description :

1. Write a function called 'describeCountry' which takes three parameters: 'country', 'population' and 'capitalCity'. Based on this input, the function returns a string with this format: 'Finland has 6 million people and its capital city is Helsinki'
2. Call this function 3 times, with input data for 3 different countries. Store the returned values in 3 different variables, and log them to the console

### Project Solution :

```
const describeCountry = function (country, population, capitalCity) {  
  return `${country} has ${population} million people and its capital city is  
  ${capitalCity}`;  
};  
  
const describeIran = describeCountry('Iran', 85, 'Tehran'); // for 2021  
const describeCanada = describeCountry('Canada', 38, 'Ottawa'); // for 2021  
const describeEngland = describeCountry('England', 55, 'london'); // for 2018  
  
console.log(`${describeIran} and  
${describeCanada} and  
${describeEngland}`);
```
