

## In the Name of Allah

**Project Title:** Prj 3

**Programming Software:** Visual Studio Code, Version 1.73.1

**Programming language:** JavaScript

**Project Description :**

1. Set the value of 'language' to the language spoken where you live (some countries have multiple languages, but just choose one)
2. Think about which variables should be const variables (which values will never change, and which might change?). Then, change these variables to const.
3. Try to change one of the changed variables now, and observe what happens

**Project Solution :**

```
// const => Country , Continent , Language
// Let => Population
let language;
language = 'Persian';
let population = 85; // for 2021 in million
console.log(population);
population = 90; // for example for 2025 in million
console.log(population);
```
