In the Name of Allah

Project Title: Prj 19

Programming Software: Visual Studio Code, Version 1.73.1

Programming language: JavaScript

Project Description :

1. Create an object called 'myCountry' for a country of your choice, containing properties 'country', 'capital', 'language', 'population' and 'neighbours'
2. Using the object from the previous assignment, log a string like this to the console: 'Finland has 6 million finnish-speaking people, 3 neighbouring countries and a capital called Helsinki.'
3. Increase the country's population by two million using dot notation, and then decrease it by two million using brackets notation.

Project Solution :

```javascript
const myCountry = {
  country: 'Iran',
  captital: 'Tehran',
  language: 'Persian',
  population: 85,
  neighbours: ['Iraq', 'Turkey', 'Afghanistan', 'Pakistan'],
};
console.log(
  `${myCountry.country} has a ${myCountry.population} million
${myCountry.language}-speaking people, ${myCountry.neighbours.length} neighbouring
countries and a capital called ${myCountry.captital}`
);
myCountry.population += 2;
console.log(myCountry.population);
myCountry['population'] -= 2;
console.log(myCountry.population);
```
